

**Crimson Princess Japanese Maple**  
*Acer palmatum 'Crimson Princess'*

Height: 10 feet

Spread: 10 feet

Sunlight: ○ ●

Hardiness Zone: 6a

Group/Class: Dissectum

**Description:**

A popular high quality small tree with crimson emerging foliage that turns bronze in summer and spectacular fall color in a vivid shade of red, compact and artistic growth habit; demands a place of eminence in the garden

**Ornamental Features**

Crimson Princess Japanese Maple has attractive coppery-bronze foliage which emerges crimson in spring. The deeply cut ferny palmate leaves are highly ornamental and turn an outstanding scarlet in the fall. Neither the flowers nor the fruit are ornamentally significant.

**Landscape Attributes**

Crimson Princess Japanese Maple is an open multi-stemmed deciduous shrub with a rounded form and gracefully weeping branches. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Crimson Princess Japanese Maple is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

### **Planting & Growing**

Crimson Princess Japanese Maple will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Crimson Princess Japanese Maple makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
