

Scolopendrifolium Japanese Maple

Acer palmatum 'Scolopendrifolium'

Height: 12 feet

Spread: 12 feet

Sunlight: ○ ●

Hardiness Zone: 6b

Other Names: Scolopendrifolium Rubrum, Atrolineare

Group/Class: Linearilobum

Description:

This compact Japanese Maple has narrow, sword-like leaves that emerge red and stay bronzy-red in summer; bushy upright habit; Japanese maples are the most coveted of all small landscape trees, it has almost the perfect shape, habit, and fall color

Ornamental Features

Scolopendrifolium Japanese Maple has attractive dark green foliage with coppery-bronze undersides which emerges dark red in spring. The small deeply cut ferny palmate leaves are highly ornamental and turn outstanding shades of yellow, orange and red in the fall. Neither the flowers nor the fruit are ornamentally significant.

Landscape Attributes

Scolopendrifolium Japanese Maple is a dense multi-stemmed deciduous tree with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Scolopendrifolium Japanese Maple is recommended for the following landscape applications;

Planting & Growing

Scolopendrifolium Japanese Maple will grow to be about 12 feet tall at maturity, with a spread of 12 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Scolopendrifolium Japanese Maple is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, this plant may be too tender to survive the winter if left outdoors in a container. Contact our store for more information on how to protect it over the winter months.
