

### **Green Showers Boston Ivy**

*Parthenocissus tricuspidata* 'Green Showers'

Height: 40 feet

Spread: 24 inches

Sunlight: ○ ●

Hardiness Zone: 4a

Other Names: Japanese Creeper

#### **Description:**

One of the showiest of the landscape vines with very attractive lime green leaves that turn purplish-red in fall; bluish fruit in fall; excellent for screening everything from fences and arbors to homes and buildings; self-clinging, tough and adaptable

#### **Ornamental Features**

Green Showers Boston Ivy has attractive lime green foliage which emerges yellow in spring. The large serrated lobed leaves are highly ornamental and turn an outstanding deep purple in the fall. It produces blue berries in late fall. The flowers are not ornamentally significant.

#### **Landscape Attributes**

Green Showers Boston Ivy is a dense multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This woody vine will require occasional maintenance and upkeep, and can be pruned at anytime. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Green Showers Boston Ivy is recommended for the following landscape applications;

- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Green Showers Boston Ivy will grow to be about 40 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it tends to be leggy near the base and should be underplanted with low-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This woody vine does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
